

# Gardening Club

This year the Gardening Club met every Wednesday after school, welcoming new members and old faces from last year. The children have been planting vegetables and flowers and have also been on trips to the garden centre.

The children have recorded the growth of the plants, especially those grown from seed. They took soil samples from around the school and examined the differences between them, they were amazed to discover

what a variety there was. They found that plants prefer a soil which is rich in peat.

The children have been regularly weeding, deadheading and watering their garden. Tomatoes, cucumbers, onions and radishes are just a few of the vegetables we are eagerly awaiting. The lettuces and cabbages have already been taken home and enjoyed by the whole family.
